

AirLink Intelligent Gateways

Tightly Integrated with Garmin Fleet Management

AirLink MP

AirLink PinPoint X

AirLink PinPoint XT

POWERED BY: **ALEOS**

COMPREHENSIVE MOBILE SOLUTION

Sierra Wireless AirLink in-vehicle platforms with Garmin Fleet Management Interface (FMI) provide customers with a comprehensive mobile solution for location based services, driver communications, vehicle telemetry and fleet management by combining a highly intelligent mobile communications platform with an easy-to-use Garmin Personal Navigation Device (PND).

AirLink gateways and routers feature ALEOS™ integration with Garmin FMI to enable partners to get up and running quickly with a robust AVL and job dispatch solution.

ABOUT GARMIN FMI

Garmin provides a Fleet Management Interface Toolkit to give Fleet Management solution providers the ability to extend application services into the PNDs for a complete customer solution. The FMI Toolkit increases driver efficiency by providing an MDT in the vehicle for real-time navigation, job dispatch, and other capabilities.

ALEOS

ALEOS embedded intelligence powers AirLink devices, creating a quick path to market for a total in-vehicle communications environment and simplifying integration with dispatch or AVL systems. To support the Garmin PND, ALEOS activates the FMI capabilities in the Garmin PND at startup and then maintains persistent connectivity to the Garmin PND.

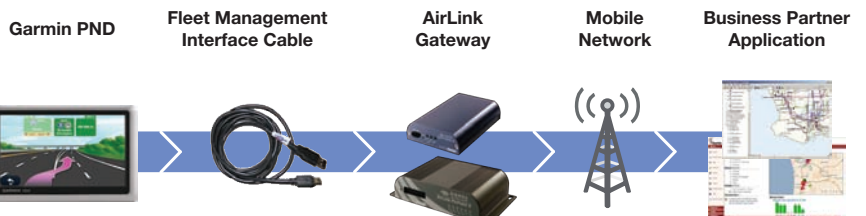

APPLICATION INTEGRATION

Integration of the Garmin FMI into ALEOS seamlessly exposes new FMI commands and features as they are made available without requiring an ALEOS update.

By leveraging the API in ALEOS, FleetEyes has deeply integrated their AVL/Field Service application with Sierra Wireless AirLink gateways. This integration enables FleetEyes to take advantage of remote configuration capabilities, as well as facilitating deployment of unique features like vehicle diagnostics, the addition of peripheral equipment and many other features.

AUTHORIZED PARTNER

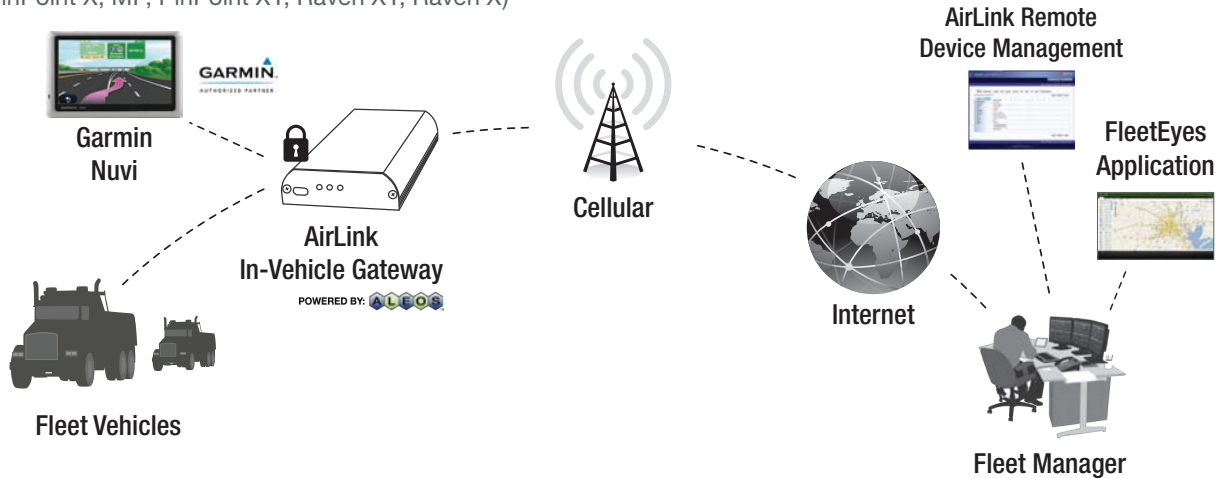

For more information on the solutions and purchase instructions contact us at AirLinkSales@sierrawireless.com

How it works:

The Garmin FMI is integrated directly into ALEOS™ and available with any AirLink intelligent gateway with a serial interface (e.g. PinPoint X, MP, PinPoint XT, Raven XT, Raven X)

FleetEyes:

FleetEyes is a provider of AVL/GPS systems designed to optimize cross jurisdictional cooperation. FleetEyes uses information from separate dispatch systems for easy collaboration among multiple agencies regardless of the platform. FleetEyes creates a Common Operating Picture for one or multiple agencies. Their clients include commercial ambulance companies, hospital based EMS, municipal EMS, air medical, fire services, health departments, and hospitals.

Features:

- FMI integrated into ALEOS
- Vehicle tracking on feature-rich Google map
- Easy integration with your CAD
- Connections to multiple servers simultaneously
- Job dispatching
- Route planning
- Two-way text messaging
- Advanced Geo Fences and Smart Alerts

Benefits:

- Automatic updates for new FMI features
- Increased fleet and field service efficiency
- Lowered vehicle operating expenses
- Shortened response times
- Reduced unnecessary miles driven
- Reduced legal exposures for the organization

How to Buy:

For more information on deploying a fleet management solution with FleetEyes/Garmin FMI solution powered by Sierra Wireless, contact FleetEyes directly at Sales@fleeteyes.com or contact Sierra Wireless at AirLinkSales@SierraWireless.com.

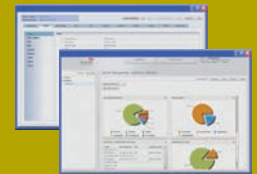

RUGGED INTELLIGENCE

ALEOS™ embedded intelligence powers AirLink devices and supports 24/7 always-on persistent connectivity, secure real-time, two-way data exchange.

REMOTE MANAGEMENT

The AirLink suite of management tools enables remote configuration, administration, and control deployments of any size.

Together, ALEOS and AirLink tools enable customers to extend their enterprise by managing deployments from anywhere with Internet connection.
